

**WITHOUT COMPLETING THE FOLLOWING AT LEAST 1 WEEK BEFORE COURSE START, YOU WILL NOT BE ALLOWED TO TAKE PART IN THE COURSE!** (seriously, you won't)

See more details about each point below, read those before starting as there are a couple of areas where you will be delayed 2-3 days if you don't do it properly:

1. **Create an account in SUPR.**
2. **Apply for membership in the course project.**
3. **Wait for an email from UPPMAX with your UPPMAX account details.**
4. **Log in with your new UPPMAX account.**
5. **Create a new file with your user name in the designated folder. This way we will know who has completed these steps.**

These steps are necessary to catch problems with accounts and logins, and more importantly, to avoid extensive delays due to students not performing this necessary setup prior to the course. The course will not wait for you to fix login problems, and you will be delayed at least half a day and will fall behind from the start.

**IMPORTANT: If you do not complete these steps one week before the course, you will receive an email cancelling your participation and your spot will go to someone on the waiting list.**

1. **Create an account in SUPR.**
  - If you already have a SUPR account, please continue to step 2.
  - Go to <https://supr.snic.se/> and click "Register New Person" at the bottom of the first page. Complete the registration process, preferably using SWAMID, and login.
  - Check your email for the confirmation mail and click the link in it.
2. **Apply for membership in the course project.**
  - Log in using your SUPR account.
  - Under the "Projects" heading, press the "View and Manage Projects" button.
  - Search for the project ID: **g2015037**
  - Press the "Request" button to apply for membership in the project.
3. **Wait for an email from UPPMAX with your UPPMAX account details.**
  - Within about 2 working days you should get an email from UPPMAX asking you to accept the usage rules. You will have to respond "YES" on this mail to confirm.
  - A while later you will get an email with your user name, and another email with a link to your temporary password. **NOTE:** the link is only valid for 1 **VISIT** or 7 days, so if you click the link you better save the temporary password, because you will not be able to use the link again. Do this before 7 days have passed, otherwise the link will no longer be valid.
4. **Log in with your new UPPMAX account.**
  - Open your terminal program (Terminal in OSX and Linux, otherwise download [MobaXterm](#) (portable edition) if you have Windows).
  - Type this command in your terminal program:  
**ssh -Y your\_uppmax\_user\_name@tintin.uppmax.uu.se**  
(obviously replace *your\_uppmax\_user\_name* with your uppmax user name)
  - You will be asked for your password now, and you will not see any response in the terminal while typing your password. This is to hide the length of your password, i.e. normal. Just press enter when you have typed it in and you should log in.

- If it is your first time logging in, you will be forced to change your password. See <https://www.uppmax.uu.se/getting-started-first-login-to-uppmax#CommonforallsystemsWindowsLinuxOSX> for more information and pictures about that.
5. **Create a new file with your user name in the designated folder.**
- You should now be logged in and ready to create the file that tells us that you have completed the steps. Type the command:  
**touch /proj/g2015037/completed/your\_uppmax\_user\_name**  
and of course replace *your\_uppmax\_user\_name* with your uppmax user name.
  - Unless you got some kind of error message you should now be finished. To make sure the file was created you can type  
**ls /proj/g2015037/completed/your\_uppmax\_user\_name**  
(you guessed it, replace it with your user name)  
It should write out the name of the file if the file exists. If you get an error message, please contact the course leader.
